Title

GENMEDOC: An inter-regional network of Mediterranean Seed Banks

Key words

Genetic resources management, *ex situ* conservation, interchange information, common models

Summary

The Genmedoc project, an inter-regional network of mediterranean plant conservation Centers, is dedicated to the interchange of scientific and technical information and the adoption of strategies and common protocols of work in relation to conservation and management of plant genetic resources, very specially of those taxa that live in the habitats selected by the Habitats Directive (92/43/CEE, approved by the Council of the European Union, the 21st May of 1992).

The project has the following general objectives:

- Elaboration of common models of flora genetic resources management
- Information exchange among the partner Centers, to share technical knowledge about preservation and management of mediterranean flora taxa
- Promotion of the innovation in the land management technicians, forest nurseries and the technological sector connected
- Collaboration among the conservation Centers and the regional Administrations responsible of the environmental management
